English Walnut Farms and Nurseries
ALBERT C. POMEROY
Lockport, N. Y.

Photograph taken Spring
1911 of an orchard of
*Hardy
Pomeroy
English
Walnut
Trees*

on the Pomeroy Farm,
Lockport, N. Y., with
peach trees used as fillers.

Same orchard photographed fall of 1912. Note the growth. This orchard bore nuts five years after transplanting. The nut trees are 40x40 ft. There is a great future for those setting out English Walnut orchards. The nuts are advancing in price and the orchards sell from \$400 to \$1,000 an acre.

An orchard of *Hardy Pomeroy English Walnuts* in Niagara County, N. Y., 12 years old, yielded fall of 1912 an average of $\frac{1}{2}$ bushel per tree, which is a better yield than trees the same age in California.

(Photo taken August, 1912)

This picture shows an English Walnut tree *not* the *Hardy Pomeroy* variety. The owner of this tree thought, after seeing some of the *Hardy Pomeroy English Walnut* trees thriving in his locality, that any kind of an English Walnut tree would do as well.

Another man said recently, "I would not take \$100 each for my orchard of *Hardy Pomeroy English Walnut* trees." He also said, "Seeing my beautiful trees thrive and yield so well has prompted many in my section to plant any old kind of English Walnut trees, and in every instance complete failure has been the result."
